MOBILE APPLICATION DEVELOPMENT

Providing 360 degree services in the areas of mobile web and internet marketing

TECHNOLOGY - OUTSOURCING - CONSULTING

Mobile application technologies are fast changing the landscape of technologies and are soon becoming a necessity. The present day work culture no more operates out of a singular central point. Rather it's a one that is highly decentralized and sweepingly mobile. The fastest transmission of knowledge and data is the requirement of the hour and mobile application technology is going to be the beacon. The sooner it is realized the better it is. The methodologies and the whole gamut of operations need to be based on this latest revolution.

iPhone

The SDK for the iPhone enables further work on the iPhone features like dialer, proximity sensor, touch screen interface etc. An in depth cognizance of the of the iPhone architecture spine is our forte.

BlackBerry

We have the rare expertise of working in Java Micro Edition, and MDS that form the backbone of Blackberry. Blackberry mobile developer can be customized effectively according to the diverse needs of the industries and business types.

Android

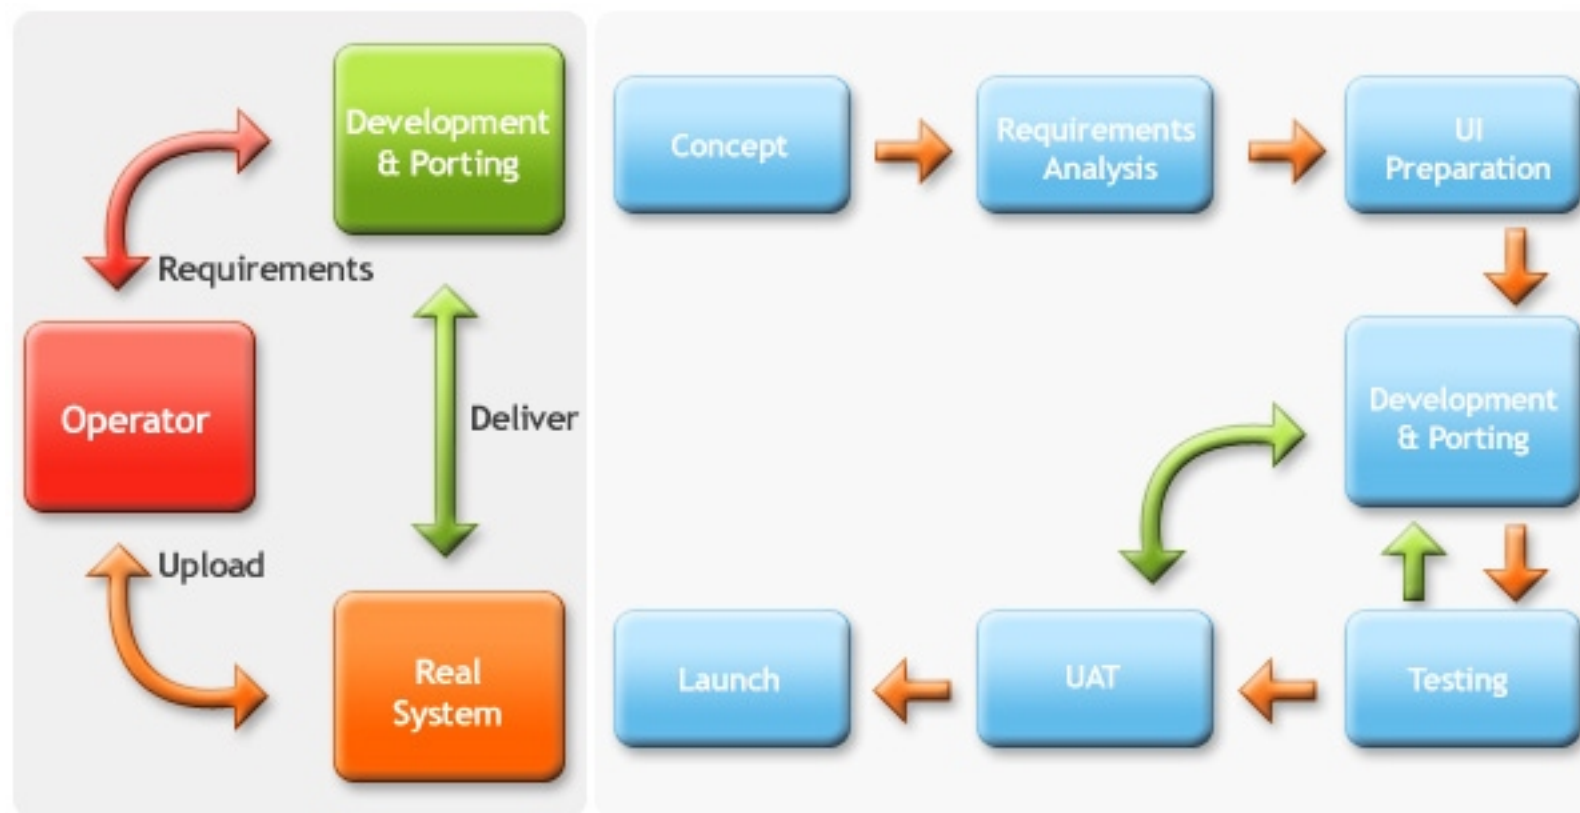

Our experts know the warts and all about Android, the new mobile platform introduced by the Google. The beta version of this new platform's SDK provides API's and tools to create custom applications with Java programming language.

Symbian

We have the rare expertise of using Symbian best suited to design the specific requirements of the smart 2G and 3G smart phones. It enjoys the strength of the advanced integrated application and the mobile telephony.

A strictly professional process mobile application process we make sure that the designed system is such that it can port the application subsequently to numerous handsets. Our customers are guided right through their user interface design on the different handsets and that too with different handsets.

Flexsin Technologies (P) Limited.

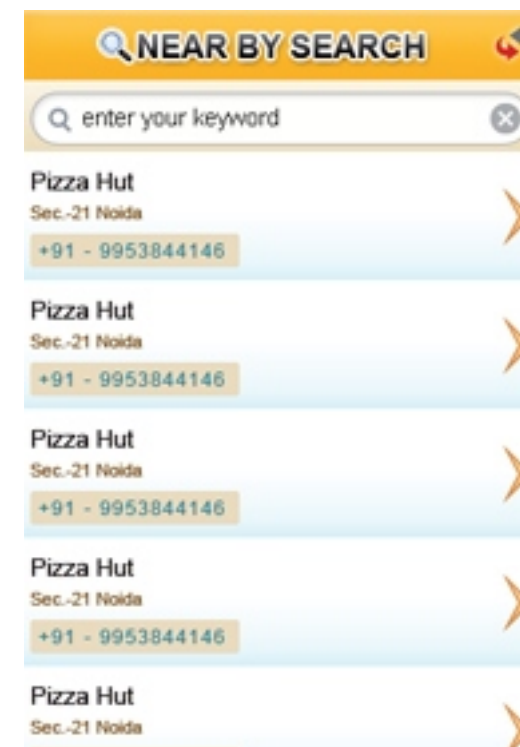

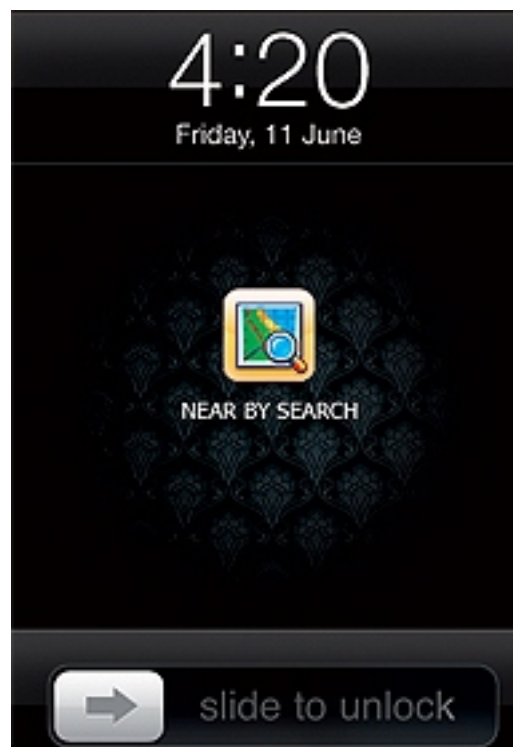

Application: NearByk
Category: Lifestyle

Devices: iPhone, iPod Touch

Description: NearBy is an iPhone application, which allows a user to search to any interest in near by locality. For example, if a user wants to know the nearby dining place or movie theatre, NeayBy will provide this information. This application is a location aware app, which identifies the locality of user using GPS. NearBy consumes google APIs to fetch the desired result. The application shows the found item on map and if you rotate the phone, it shows the route for selected result on Google Map.

Screen Short

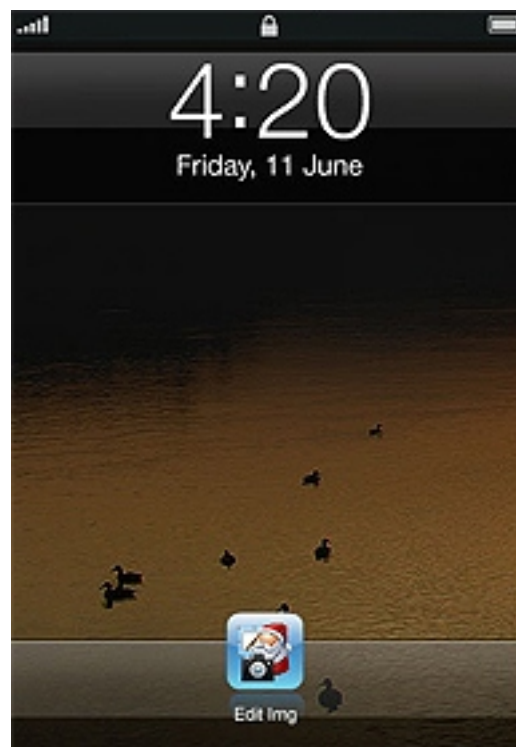

Application: ChrisMask
Category: Photography

Devices: iPhone, iPod(with camera) and iPad

Description: ChrisMask is an entertainment app, which allows the users to click photographs using a set of masks on iPhone, iPod (with camera only) and iPad. This universal application allows user to choose from available set of masks. Once a user selects a mask, it shows over camera where face of targeted person can be adjusted and a photo can be clicked. The application saves the final photo into device's photo library, from where photos can be shared to family, friend and all.

Screen Short

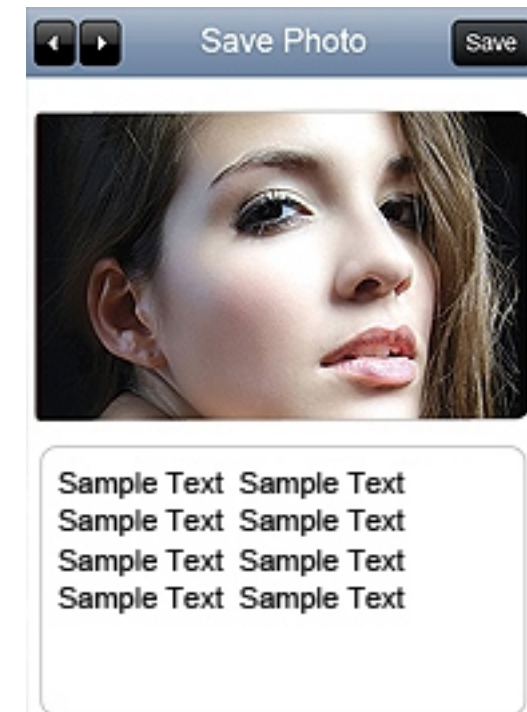

Application: PhotoLog
Category: Lifestyle

Devices: iPhone, iPod Touch

Description: PhotoLog allows the users to save fond memory in the shape of photographs and text descriptions. The user would be able to review back these memories by flipping through the log-book on one's iPhone and iPod touch. PhotoLog also allows users to add new memory at a single button touch. There is also an option to mark the log-book as private, so that no un-authorized person can access it.
